Reverse Osmosis Purification

Stage 1: Sediment Filter
Stage 2: Activated Carbon Filter
Stage 3: 100 GDP Reverse Osmosis Membrane
Stage 4: Post Carbon Filter

Sediment Filter

Removes particulate matter before reaching additional filters. Does not remove chemicals or heavy metals.

Pre-Carbon (GAC) Filter

Removes sediment and compounds that reduce second or third-stage filter life.

Post Carbon / Block Carbon

Removes chlorine and organic chemicals that contribute to bad taste and odor.

Ultrafiltration (UF) Membrane

Removes nearly all high molecular-weight substances (even bacteria and viruses).

Reverse Osmosis Filtration

Reverse osmosis pushes water through a semi-permeable membrane at extremely high pressure. The result is crystal clear water that is free from virtually all impurities found in municipal water sources.
